EarthRenew CEO Carin to Speak at Reform Institute – National Energy Symposium

CALGARY, AB – Christianne Carin, founder, chair and chief executive of Calgary-based EarthRenew Organics Ltd. will speak in Washington, DC on April 21 at a national energy symposium – *Reforming American Energy: Encouraging Innovation, Producing Solutions* -- held by The Reform Institute, the company announced today.

The all-day conference will bring together business leaders, industry experts and elected officials to examine private sector investment and innovation in building resilience in America’s energy sector. The Center for Energy and Environmental Progress at The Reform Institute (www.reforminstitute.org) will host the meeting at the Hyatt Regency on Capitol Hill.

A leading proponent for energy efficiency, Ms. Carin will speak at a 1:15 pm (EDT) panel discussion on “Maximizing Our Nation’s Energy Resources and Becoming More Energy Efficient”. Other senior executives from Lockheed Martin, Volkswagen, Southwest Gas, Duke Energy, and Nissan are among the other confirmed speakers. U.S. Senators John McCain and Lisa Murkowski, representing Arizona and Alaska respectively, will address the symposium as well. Clean Skies TV, an online network dedicated to covering energy and the environment (www.cleanskies.tv), will broadcast the event.

Ms. Carin, who founded EarthRenew in 1999, is the company's primary inventor and technologies developer. She is responsible with others on her team for more than 2,200 patent claims filed in 92 countries around the world and numerous patents issued globally since 2004. One of the major technologies EarthRenew has commercialized is used in heat processing. In industrial applications and thermal desalination, these technologies, when applied, provide economic advantages by reducing energy costs by as much as 60% through utilizing most of the energy in the input fuels to produce power and process heat.

About EarthRenew

Founded in 1999, the privately-held company is headquartered in Calgary, Canada and with US operations based in Half Moon Bay, CA, near San Francisco. The company developed, patented and implemented new clean technologies, which utilize the direct heat from a natural gas turbine in a cooking process, replacing typically used fuel burners. The initial commercialization of these technologies involves the manufacture of a new class of proprietary fertilizers by cooking raw manure, biosolids and green waste that contain concentrated organic matter and nutrients bundled in granules at high temperatures without burning or degrading the content.

About The Reform Institute

The Reform Institute is a nonpartisan, not-for-profit centrist think tank that formulates and advocates solutions-based reform in vital areas of public policy. It provides objective research and analysis in critical areas of public policy, including homeland and national security, energy and environmental progress, economic opportunity and competitiveness, immigration policy, governance and election reform. Additional information may be found at www.reforminstitute.org.
